PNEUMATIC
DRIVE BELLOWS
PUMPS

F

For high purity chemical handling applications in semiconductor processing applications

The F-Series includes pneumatic drive bellows pumps that are designed for use in the semiconductor manufacturing processes.

Iwaki introduced the first designs over 20 years ago and has continually developed new products to keep up with rapidly changing market needs.

With over 20 different models available the quality and performance of our products has made them the preferred solution by device manufactures all over the world.

Their quality and performance are recognized and highly rated by device manufacturers all over the world.

We offer not only pump solutions, but also accessories including controllers, dampeners, and liquid chemical supply systems that have been developed to compliment a comprehensive portfolio of quality equipment for wet process and surface preparation applications.

Guideline for pump selection

Max. discharge capacity (L/min)	Max. supplied air pressure (MPa)	Model	Max. air consumption (NL/min)	Temperature range (°C)	Main materials	
					PTFE	PFA
100	0.5	FS-H	1210	5-180	○	○
100	0.7	FS-N	1495	5-60	○	○
80	0.5	FW	820	10-100	○	○
40	0.5	FW-H	480	10-180	○	○
22	0.3	FF	180	5-100	○	○
40	0.2	FF-H	200	20-180	○	○
40	0.4	FA	200	5-100	○	○

*Please check the specifications of each pump for liquid temperature and maximum supply air pressure.

Application

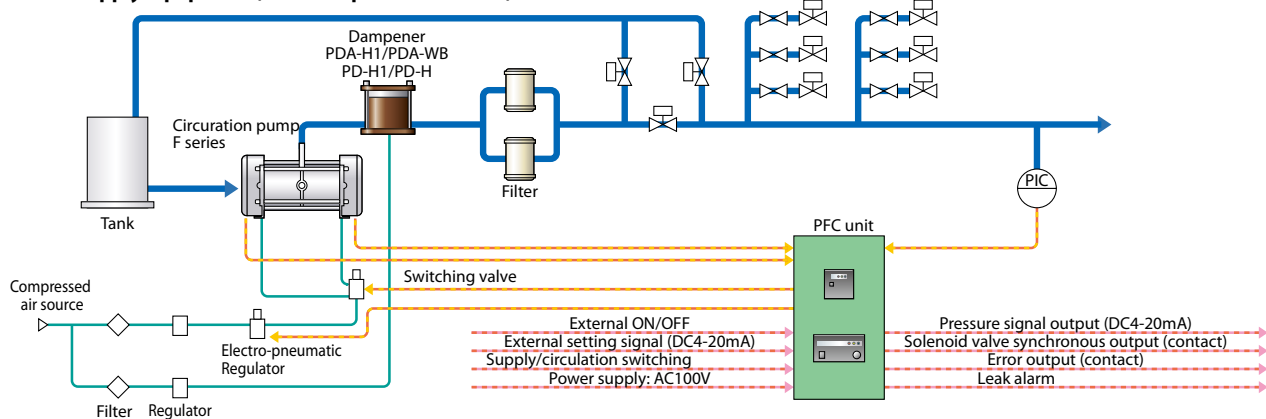

◎ Usable ○ Usable depend on condition

Model		FS-H	FS-N	FW	FW-H	FF	FF-H	FA	CFD

Wafer wet-bench

FS-H Series

A small, lightweight and cost effective solution

FS-30HT

- Using a higher stroke rate (240 spm maximum) has resulted in a reduction in size, weight and cost as well as reduced pulsation. Note: The maximum stroke rates are dependent on model and application; please refer to the specification table for details.
- All liquid contact components are constructed of high purity fluoro resin materials. The exterior of the units are also coated in fluoro resin so that no metallic components are exposed. FS-H pumps also utilize our own shaft seal design (patent pending) resulting in a marked reduction in particle generation.
- The pumps are rated for liquid temperatures ranging from 5 - 180 °C with discharge pressure to 0.45 MPa. Applications include wet process circulation and CMP processes, as well as chemical distribution feed systems.
- The FS-H body design eliminates the need for periodic tightening of the stud bolts. External access to the proximity sensors results in reduced maintenance and down time.
- The pump uses a proximity sensor drive system which opens/closes an external air solenoid valve providing easy performance control capabilities that are compatible with a variety of controller options.

FS-100HT-2

Flow and temperature capabilities offer improved process efficiencies

- Maximum flow rate of up to 100 L/min with 180°C liquid. This allows delivery of CARO (SPM) or H3PO4 at a flow rate 1.8 times higher than our existing pumps (55 L/min).
- Higher flow rates improve cleaning efficiency and removal of containments during wafer processing. Cleaning times are also reduced in systems with multiple processing lines.
- In addition to the use of fluoroplastic wet ends (PTFE and PFA), a fluorine coating on the pump's outer surfaces offers the best resistance to vapors from acid, alkali and hydrogen peroxide chemistries used in semiconductor manufacturing.
- Optimization of design has resulted in reduced weight of about 15% of our existing 80-100L models making installation and replacement work easier.
- The model adopts a sensor drive system that switches the solenoid valve using the proximity switch built into the pump. A leak sensor is also included as standard equipment.

FS-N Series

Max 100L/min. High flow design for chemical distribution applications

- Perfectly suited to high flow & pressure chemical distribution requirements.
- The high stroke rate (Max 200 SPM:FS-80NT) provides for a compact, lightweight and lower cost option without sacrificing flow and pressure capability.
- All liquid contact materials are made of high purity fluororesin resulting in contamination-free construction. Our unique patented shaft seal (FS-80NT...PAT.) also dramatically reduces particle generation.
- The pump utilizes a built in proximity sensor driven control system to switch an external air solenoid valve. Leak sensors are also included as standard equipment.
- Seal welded pump head and bellows eliminate leakage.

FW/FW-H Series

Robust bellows design provides for high pressure capability and extended service life

- The use of a thick bellows increases the pumps discharge pressure rating to as high as 0.45 MPa maximum. In addition, the bellows have three to four times longer service life than a diaphragm. This results lower case a substantially reduced downtime.
- This design is commonly used for chemical feed, the FW series can be used in high pressure and medium temperature (10 - 100 °C) cleaning systems as well as for the circulation of CMP slurry liquids. The FW-H with its higher temperature capability (10 - 180 °C) is ideal for chemical circulation in wafer cleaning applications.
- Easily adaptable fitting capability, the internally formed PFA suction and discharge tubes prevent the accumulation of particles.
- When connected to a special controller, the discharge can be monitored and controlled easily.
- The pump utilizes a built in proximity sensor driven control system to switch an external air solenoid valve. Leak sensors are also included as standard equipment.

FF/FF-H Series

Energy efficient design consumes less air

- The FF series is designed for use with medium temperature liquids (Al cylinder type: 5 to 100°C, PVC cylinder type: 5 to 50°C) and the FF-H series is designed for temperatures ranging from 20 to 180°.
- All liquid contact components are constructed of high purity fluoro resin materials with no metal or elastomers. The bellows are welded to the center eliminating leaks associated with heat cycles. The efficient design minimizes dead air volume surrounding the bellows to minimize air consumption.
- Shaft packing is easily accessible externally, no need to disassemble the pump for replacement.
- Suction and discharge fluid connections are PFA tubes and for FF models PFA tubes with special fittings are available.
- The pump utilizes a built in proximity sensor driven control system to switch an external air solenoid valve. Leak sensors are also included as standard equipment.

Designs for circulating moderate temperature fluids

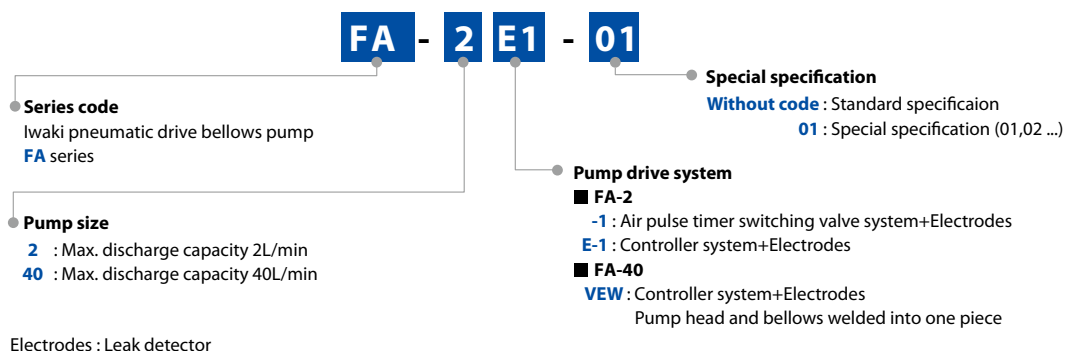

- There are two standard models available in the FA series; the FA-2E, a horizontal type for lower flow requirements and the FA-40VEW, a vertical type for higher flow rates. A typical application for the FA-2E is in a spray system for single wafer processing while the FA-40VEW is suitable for batch cleaning of 200/300 mm wafers.
- The FA-40VEW is designed for a long service life and uses a robust bellows design suitable for continuous operation at higher discharge pressures.
- Discharge rates can be easily monitored and controlled when used with a dedicated controller.
- The pump utilizes a built-in proximity sensor driven control system to switch an external air solenoid valve. Leak sensors are also included as standard equipment.

Option

■ Dampener

The Installation of a dampener on the discharge side of the pump will reduce pulsation and prevent particle release through filters as well as from pipe vibration.

Pulse dampeners PD-H (for wet use)

For the FS-H only

- A low cost and compact dampener.
- Liquid inside the bellows can be easily drained.
- A leak sensor is included as a standard.

Specification

Model		PD-15H		PD-30H		PD-60H	
Applicable pumps		FS-15HT1/T2		FS-30HT1/T2		FS-60HT1/T2	
Max. supplied air pressure	MPa	5-100	101-180	5-100	101-180	5-100	101-180
Liquid temperature range	℃	0.3	0.2	0.3	0.2	0.3	0.2
Supply air pressure range	MPa	0.15-0.3	0.15-0.2	0.15-0.3	0.15-0.2	0.15-0.3	0.15-0.2
Pulsation pressure range* MPa		0.04 or less					
Connection size		1/2" PFA tube		3/4" PFA tube		φ25×φ22mm PFA tube	
Supply air connection size		Rc1/8					
Wet-end materials		PTFE, PFA					

*Liquid viscosity should be 50mPa·s or below.

Note : The damper cannot be used at a pressure above the level specified for the pump.

Example of installation

Pulse dampeners PD-H1

FF FF-H FA

- No automatic pressure adjustment.
- The PD-H1 is a medium-pressure design for use with FF, FF-H and FA pumps.

* Models with leak sensors are available through special order.

Automatic dampeners PDA-H1/WB/W

FS-H FW FW-H FF FF-H FA

- Automatic pressure adjustment minimizes downtime, eliminates manual adjustments.
- Liquid inside the bellows can be easily drained. (PDA-WB/W model)
- The PDA-H1 is a medium pressure design for use with the FF, FF-H, and FA pumps. The PDA-WB is a high-pressure design suitable for use with the FW, FW-H, and FS-H pumps. Typical applications include drug delivery and dispensing.
- The PDA-WB/W includes a leak sensor as standard. (For the PDA-H1, a leak sensor is available through special order.)
- For the PDA-WB/W, only the specified liquid pipe joint can fit the model. Please contact us before use to check if your joint is applicable.

Automatic dampeners PDA-100WBN

For the FS-100NF only

- Automatic pressure adjustment minimizes downtime, eliminates manual adjustments.
- Dampener pressure is automatically adjusted to the minimum pulse pressure even if the pump discharge load changes due to a clogged filter. The unit prevents particles being released from the filter and the pinging vibration.
- A leak sensor is included as a standard.

Note 1: The damper cannot be used at a pressure above the level specified for the pump.

Note 2: The range of pulse pressures depends on conditions of usage. For further information, please call us.

Note 3: For the PDA-WB, some joints are not applicable. Please contact us for details.

Model	PDA-100WBN
Applicable pumps	FS-100NF
Max. supplied air pressure MPa	5 - 60
Liquid temperature range °C	0.7
Supply air pressure range MPa	0.2 - 0.7
Pulsation pressure range* MPa	0.15 or less
Connection size	25A
Supply air connection size	Rc 1/4
Wet-end materials	PTFE

*Liquid viscosity should be 50mPa·s or below.

Note 1: The max. liquid pressure is obtained when a discharge line is shut off.

Note 2: Contact us for the special damper for the FS-80NT.

■ Quick Exhaust Valve

When installed on the air exhaust lines at the pump the exhaust valve will help to reduce pulsation and prevent particle release from the filter as well as from pipe vibration.

QEV

Quick exhaust valves should be installed between the pump and the external solenoid valve. This helps to prevent corrosion of the solenoid valve from return air. It also reduces exhaust resistance to allow the bellows to move smoothly through each cycle.

Specification

Model	Connection size	Applicable pumps
QEV-8V	Rc1/4	FW-20/20H, FF-10/20/20H, FA-2, FS-15/30
QEV-10V	Rc3/8	FW-40/40H, FF-40H, FA-40, FS-60/80N

*Please contact us for quick exhaust valves for FS-100HT and the FS-100NF.

■ Pump Controller/Driver

The external solenoid valve is switched in response to signals from the built-in proximity sensors on each side of the bellows to ensure reliable operation of the pump. Two controller options are available along with one driver option.

Pump controller FDC-1

FS-H

FS-N

FA

FW

FW-H

FF

FF-H

- The pump discharge rate can be monitored and maintained at a constant level by connecting an electric air regulator (optional) to the pump air supply line. This enables stable flow and filtering even when the discharge load varies due to increased filter resistance. In addition, the service life of the bellows will be maximized because the difference between its internal and external pressures is kept to a minimum.

- The controller can monitor the flow rate, the number of strokes, and the total count.
- The unit operates either in the AUTO mode using external signals or in the MANU mode for manual control.
- The flow rate can be set at two different values as desired.
- In addition to the sensor mode using the proximity sensors, the timer mode is included as a standard feature. This enables continued pump operation in the timer mode in case of the failure of a proximity sensor.
- The unit is equipped with various alarm displays and output functions, including leak alarm and a pump malfunction alarm.

Dimensions in mm	W158 x D152 x H48	

■ Chemical replenishing system

CFD-1T-B

With a resolution of up to 1.0mL/shot fine dispense volumes can be achieved

■ The resolution of the CFD-1T-B has been greatly improved compared to our existing models. The minimum flow of 1mL/shot offers greater accuracy in chemical condensation control that is required in the wafer cleaning process. The CFD-1T-B always feeds the correct quantity of chemical without overshoot eliminating excess liquid wastage. In addition, the anti-siphon mechanism prevents unintentional siphoning.

■ The fluoroplastic wet end (PTFE, PFA, PCTFE) is capable of handling strong acids, alkalines and hydrogen peroxide, typical chemicals required for semiconductor processing. PTFE, PFA, PP, PVC external parts and PTFE coated screws provide additional protection against chemical attack from harsh environments.

■ Adjustment of the stroke length to give between 1.0-2.7mL/shot is simple by removal of the bottom cover (Factory default is 1.0mL/shot).

■ Every unit is equipped with a leakage sensor to immediately detect a leak.

*An 8 mL/shot type is also available. Please contact us for more information.

Caution for safety use:

Before use of pump, read instruction manual carefully to use the product correctly.

Legal attention related to export.

Our products and/or parts of products fall in the category of goods contained in control list of international regime for export control. Please be reminded that export license could be required when products are exported due to export control regulations of countries.

Actual pumps may differ from the photos.
Specifications and dimensions are subject to change without prior notice.
For further details please contact us.

The posting and copying from this catalogue without permission is not accepted firmly.
